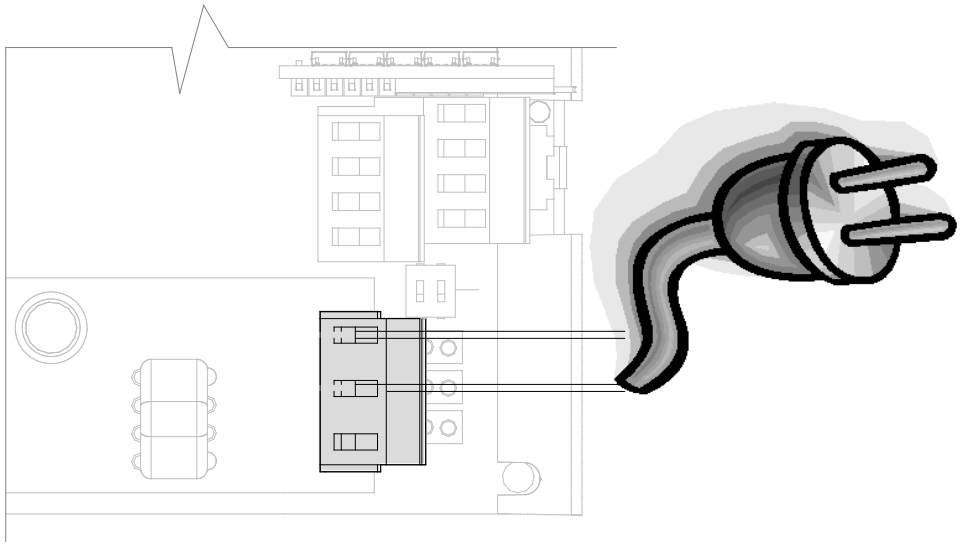
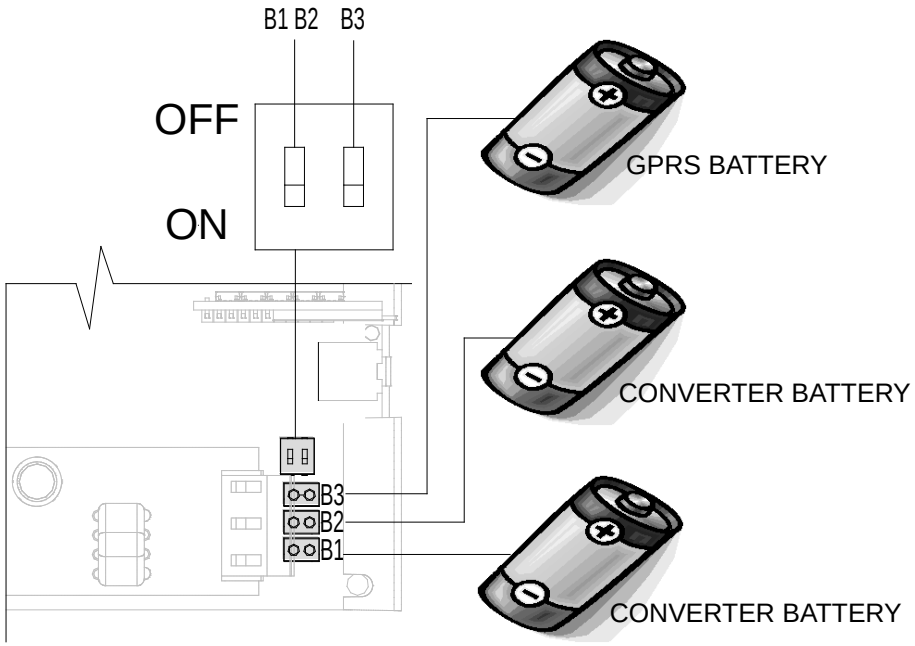
BY MAIN VOLTAGE



Auto detection of converter power source: batteries are automatically excluded if still main power; it always works at the maximum sampling rate (continuous sampling).

BY BATTERIES



Note : Lithium batteries are subject to special transportation regulations according to "Regulation of Dangeroug Goods, UN3090 and UN 3091". Special documentation is required to observe there regulations. This may influence both, transportation time and costs.

BATTERIES CONSUMPTION

The batteries consumption depends from the setting of the followings elements: main board, sampling interval (measure profile), sensor diameter, modem wireless link condition, frequency of data delivery, amount of data collected, interface activities (display/modem activities).
Special software to calculate the consumption is available; here below a simple scheme to evaluate the different "weight" consumption's of each element.
